Jake, Jim, Michael, this draft is just fyi in case you get questions. Sarah will be finalizing this.

HOT TOPIC: BRINE/OIL PIPELINE SPILL ON FORT BERTHOLD RESERVATION NEAR MANDAREE DRINKING WATER INTAKE: A leaking pipeline near Lake Sakakawea at the Missouri River was reported to the EPA Spill Response center on July 8, 2014, and concerned citizens have called the Region 8 Drinking Water program and reportedly posted concerns on Facebook. The spill was about 500 barrels of brine, liquid condensate, and some oil components; spill containment activities are underway. The intake for the Mandaree drinking water plant is over a mile downstream of the spill site. Region 8 Emergency Response OSC Pete Stevenson is to be onsite today; meanwhile the North Dakota DOH is sampling the water downstream of the spill. The Director of Fort Berthold Rural Water (FBRW) was aware of this situation on July 8, and indicated that preliminary sampling results from ¾ to 1 mile upstream of the Mandaree plant intake show low concentrations of detected contaminants (salt, organics). He does not see a need to shut their intake at this time, but FBRW is monitoring the situation. The Director is attending additional briefings on the results from state sampling today and will keep the Drinking Water Program informed. *Information only; no action required by RA/DRA.* **Contacts: Sarah Bahrman, 312-6243 or Mindy Mohr, 312-6525.**

Hi Sadie,

Sarah's over at CDPHE in a meeting, and we just learned of this a few hours ago. We won't make the noon Wednesday deadline to get this into the OPRA front office, but thought you'd want to at least see a draft asap. Emergency Response is fine with this. We can clean it up/get it into Word format with any corrections you and Sarah want, and get it out this afternoon.
